NOTES: Read All Instructions Before Beginning Installation

- Only qualified technicians experienced in the installation and removal of suspension components should perform this installation.
- Use of a hoist and screw jack is highly recommended and will substantially reduce installation time.
- Never work on or under a vehicle unless it is properly supported.

RECOMMENDED FRONT SET-UP

1. Raise the front of the vehicle and support it with the proper safety equipment. **Note: Never work on or under a vehicle that is not supported by the proper safety equipment.**

10. You can now adjust the upper preload collar to adjust the ride height. The recommended preload measurement in Step 7 Photo 14 will get the vehicle close to the recommended ride height but each vehicle may vary some. We recommend setting the ride height at **395mm** measuring from the ground to the center of the lower control arm bolt as shown. **Note: If you have**

larger than stock wheels and tires, the ride height will be increased. (See Photo 18)

RECOMMENDED REAR SET-UP

1. Raise the rear of the vehicle until the wheels are off the ground and the suspension is fully unloaded. **Note: Never work on or under a vehicle that is not supported by the proper safety equipment.**
